

JASON MERRONE

South Jordan, UT | (720) 255-6097 | jasonmerrone@gmail.com | github.com/Jason-Merrone

EDUCATIONAL BACKGROUND

Utah State University - B.S. Computer Science

2025

Relevant Coursework: Operating Systems, Database Applications, Computer Architecture, Cloud Development

Salt Lake Community College - A.S. General Studies

2022

SUMMARY

Detail-oriented Computer Science graduate with a strong foundation in IT support, hardware diagnostics, and systems troubleshooting. Proven ability to resolve technical issues efficiently and communicate complex solutions to non-technical users. Experienced in helpdesk operations, electronic repair, and process automation, with a passion for optimizing IT infrastructure and minimizing system downtime.

TECHNICAL SKILLS

IT Support & Hardware: Helpdesk Ticketing Systems, Hardware Diagnostics & Repair, OS Troubleshooting (Windows/Linux), Peripheral Setup

Scripting & Automation: Python, SQL, Bash, PowerShell, API Integration

Systems & Networking: System Administration Basics, Virtualization, TCP/IP Fundamentals, Relational Databases

Soft Skills: Technical Communication, Customer Service, Problem Solving, Technical Documentation

PROFESSIONAL EXPERIENCE

Capital Fuels - Operations Support Technician

Summer 2023, Aug 2025 - Present

- Utilized internal Helpdesk software to provide frontline technical support, efficiently troubleshooting and resolving user issues to ensure seamless operations.
- Developed ASP.NET and SQL solutions to automate routine administrative tasks and data entry, eliminating manual reporting errors.
- Diagnosed system bottlenecks in the loyalty program network and managed relational database queries to maintain accurate customer account records.

KSL Broadcast Group - Engineering Intern

Oct 2021 - Apr 2022

- Diagnosed and resolved hardware failures down to the component level, performing electronic repairs and system programming to minimize broadcasting downtime.
- Performed preventative maintenance on complex electronic equipment and implemented technological improvements using 3D design software.
- Maintained detailed technical documentation and performance logs for station assets, ensuring accurate inventory and repair history tracking.

TECHNICAL PROJECTS

Virtual Machine Simulation (System Architecture & Resource Management)

- Engineered a virtualized computer system from scratch in Kotlin, gaining deep insight into CPU architecture, instruction sets, and OS-level hardware interactions.
- Optimized system memory management within a tightly constrained 4KB RAM environment, demonstrating strong understanding of resource allocation.

Automated Data Processing Pipeline (Scripting & Server Deployment)

- Developed a Python-based automation tool to parse and process unstructured data, eliminating the need for manual review and saving hours of operational time.
- Configured and maintained a Flask web server to host the internal application, handling routing, API endpoints, and server-side logic securely.

Full-Stack Application Deployment (Database & Network Management)

- Administered a Django-based backend server, managing a relational database (ORM) to securely store user credentials, authentication logs, and system metrics.
- Troubleshoot server-side issues and optimized API endpoints to ensure seamless communication between the frontend and backend architectures.
