

JASON MERRONE

South Jordan, UT | (720) 255-6097 | jasonmerrone@gmail.com | github.com/Jason-Merrone

SUMMARY

Data-driven Computer Science graduate with strong expertise in Python, SQL, and Machine Learning. Proven ability to transform unstructured data into actionable insights through NLP and visualization tools. Experienced in building data pipelines and automating reporting processes to drive operational efficiency.

TECHNICAL SKILLS

Data Analysis & ML: Python (Pandas, NumPy), SQL, PyTorch, Scikit-learn

Visualization: Matplotlib, Excel (Pivot Tables), R

Web & Backend: Django, Flask, React, REST APIs

Soft Skills: Data Storytelling, Technical Communication

PROFESSIONAL EXPERIENCE

Capital Fuels - Operations Support & Data Technician

Summer 2023, Aug 2025 - Present

- Leveraged **SQL** to query and analyze customer transaction data, eliminating bottlenecks in the loyalty program registration process.
- Developed ASP.NET solutions to automate data entry, reducing manual reporting errors.
- Utilized Helpdesk software to efficiently and effectively assist customers in troubleshooting and resolving technical issues.

KSL Broadcast Group - Engineering Intern

Oct 2021 - Apr 2022

- Specialized in electronic repairs and system programming, utilizing diagnostic data to troubleshoot and resolve hardware failures.
- Contributed to technological improvements and operational efficiency through 3D design and equipment maintenance.
- Maintained detailed logs of system performance and repair history to ensure accurate tracking of station assets.

DATA & TECHNICAL PROJECTS

IDEA Survey Qualitative Analysis Tool (NLP & Data Visualization)

- Built a data analysis tool enabling professors to extract insights from unstructured course evaluation text.
- Fine-tuned a **Meta Llama 3.2** model using knowledge distillation to summarize qualitative data trends.
- Implemented dynamic data visualization on a Flask backend to display sentiment distribution and categories evaluations.

CatConnect (Computer Vision & Database Management)

- Designed a full-stack application integrating a custom **CNN** for image classification.
- Curated and pre-processed a custom dataset to train the model, achieving high accuracy in binary classification tasks.
- Managed a relational database using Django ORM to handle user data, posts, and interaction metrics.

Virtual Machine Simulation (Algorithm Optimization)

- Engineered a virtual computer in Kotlin, optimizing memory management for a constrained 4KB RAM environment.
- Demonstrated strong logic and algorithmic efficiency by implementing a 500Hz CPU instruction set from scratch.

EDUCATIONAL BACKGROUND

Utah State University - B.S. Computer Science

2025

Relevant Coursework: Database Systems, Machine Learning, Algorithms, Probability & Statistics

Salt Lake Community College - A.S. General Studies

2022
